CAREER AIM

To secure a role in a dynamic organization where I can apply and develop my skills in web and app development, while contributing innovative ideas and delivering high quality results.

EDUCATION

B.E in Electronics and Communication Engineering

Acharya Institute of Engineering and Technology | Bengaluru, KA

Pre-University Course (PUC)

Sri Sairam PU College | Saleemagar Gudemahalli, Anekal - KA

SSLC

Anekal Public School | Anekal - KA

SKILLS

Computer Applications: MS Word, Google Sheets, Google Docs

Programming: Basic Knowledge of Python

Designing: MS Word, Excel, PowerPoint, Quick Learner, Multitask Handling

Technical Knowledge: HTML, Basic CSS, UI/UX using Figma, Kombai 2.0, Cursor, Manus

Theoretical Knowledge: Basics On Nanotechnology (AFM, SEM, TEM)

CERTIFICATES

- Hackathon INNOVATEX 2025
- Certificate Internship Training Programme in IOT

PROJECTS

Radar System Using Ultrasonic Sensor

A radar system using an ultrasonic sensor with Arduino works by transmitting ultrasonic waves and measuring the echo time from objects. The Arduino processes this time delay to calculate distance, enabling obstacle detection and simple radar-like scanning applications. It is used in DRDO for encountering enemies and as aerospace radar.

Auto Rotate Solar Panel System

An auto-rotate solar panel system uses sensors and a controller (like Arduino) to track the sun's movement. The panel automatically rotates to face the sun, maximizing sunlight exposure and improving power generation efficiency. It may be used in houses, factories, and solar panel plants to get maximum energy.

START UP

GoFarmWork: Go Farm Work

A startup platform designed to bridge the gap between farmers and laborers. Farmers can post their work requirements and laborers can connect and receive work opportunities, creating a mutually beneficial ecosystem for both parties. The platform aims to improve agricultural workforce accessibility and empower rural communities.
